### **Preface**

This publication presents information relating to the containers in which fluid milk products are sold, and the methods of distribution used to market these items by handlers regulated under Federal milk marketing orders. These orders are established under the authority of the Agricultural Marketing Agreement Act of 1937.

The information in this report is based on a survey of fluid milk sales under Federal milk marketing orders during November 1993. Its purpose was to update a similar survey in November 1991, and to see if trends observed in past surveys are continuing. Data were obtained from milk handlers regulated under 38 marketing orders.

The data in this report are for volume weights of milk in 1,000 pounds. The number of each size of container can be approximated by dividing the weights shown in the report by the conversion factors shown in Appendix C.

This is the eighteenth report in a series. Similar data have been distributed based on surveys made in November 1963 through 1967, 1969, and every other year through 1991.

### INTRODUCTION

Handlers regulated under Federal milk orders process approximately three-quarters of all the fluid milk products sold in the United States. In general, the sizes and types of containers, and methods of distribution used to market this production would be representative of the entire country. In addition, although these surveys are based on November fluid milk sales, the relationships shown would be representative in other months of the year. Two exceptions would be sales in half-pint containers and sales through school outlets which would not be applicable to sales in a nonschool month.

In general, the historical trend has shown a shift in fluid milk sales from glass to paper to plastic containers, from small to large containers, and from home-delivery to wholesale delivery.

### **DEFINITIONS**

Type of Container. Containers are categorized by glass, paper, and plastic. Containers larger than one gallon shown in the glass category are metal cans. The paper category includes plastic-coated and wax-coated containers. Plastic includes rigid plastic containers, plastic pouches, and corrugated paper boxes or plastic containers with plastic linings. Containers larger than one gallon shown in the plastic column, for the most part, are bag-in-box containers.

Method of Distribution. Sales are divided into home-delivery and wholesale. Home-delivery includes sales to homes or sales to others for delivery to homes. In some instances, home-delivery may include minor sales to institutions and vendors. Wholesale includes all sales other than home-delivered. Wholesale is broken down into chain stores, institutional outlets, and all other.

Chain stores are defined as 11 or more stores (supermarket, dairy, or convenience) nationwide, primarily engaged in food retailing, and either being under common management, being franchised by a common company, or belonging to a common purchasing association. Chain stores are categorized into supermarkets or dairy and convenience stores. Also identified are vertically integrated chain stores. A chain of stores is vertically integrated if the fluid milk products sold in its stores are processed by a plant owned by the chain.

Institutional outlets are military installations and schools (elementary, high school, colleges, and universities). All other wholesale outlets include nonchain food stores, nonfood stores (drug stores, gasoline stations, etc.), restaurants, hotels, hospitals, nursing homes, vending machines, and any other type of wholesale outlet.

### HISTORICAL PERSPECTIVE

There has been a significant historical change in the types and sizes of containers in which fluid milk products have been sold and in the methods of distribution used to sell these products. The trend has been from glass to paper to plastic containers, from small to large containers, and from home-delivery to wholesale delivery. Some factors often cited in explaining these trends are: changes in consumer preferences and life styles; significant changes in the costs of packaging materials and delivery systems; technological developments in the container industry, particularly containers produced from by-products of the petroleum industry; and the increasing market share of supermarkets which brought about an additional handling of fluid milk containers by consumers.

In the first survey taken in 1963, sales of fluid milk products in glass containers accounted for about 32 percent and plastic accounted for 15 percent of the total. In the most recent survey, over 74 percent of fluid milk products were sold in plastic containers, 25 percent in paper containers, with less than one-half percent remaining in glass containers.

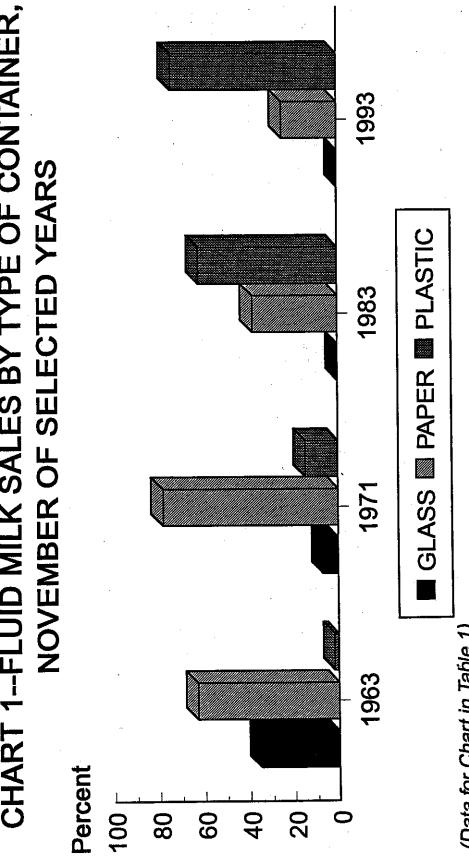

In November 1993, over 64 percent of fluid milk sales were made in gallon containers. This market share has more than doubled since 1971 and is nearly five times greater than the share found in the 1963 survey. This increase has come at the expense of half-gallons for which the market share has dropped from 56 percent of total sales in 1963 to 19 percent in 1993, and at the expense of quarts whose market share decreased from 15 percent to 4 percent during the same time period.

The importance of home-delivery of milk had decreased with every survey that had been taken through 1989. Since the first survey in 1963, the market share has dropped from about 30 percent to one percent in the last three surveys.

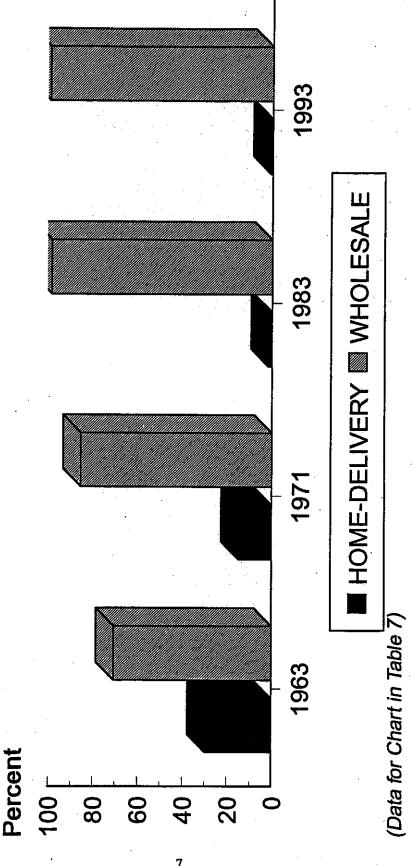

Surveys made prior to 1977 categorized all methods of distribution other than home-delivery as wholesale. Since 1977, information on the following types of wholesale distribution have been surveyed: food chain stores--supermarkets and dairy/convenience stores; institutional outlets-military and schools; and all other wholesale. Sales of fluid milk products in supermarket chain stores continued to be the predominant method of wholesale distribution with 57 percent of the market share in the most recent survey, up from 55 percent in November 1991. The market share for convenience stores increased slightly from the 1991 survey. The market share of vertically integrated food chain stores increased slightly from November 1991. The market share for the "all other" category, of which nonchain food stores are the larger proportion, decreased to about 23 percent.

The following charts and tables provide historical information from past surveys and detailed information from the current survey. Information is presented for individual Federal milk order marketing areas, regional groups of these markets, and for all markets combined. Additional information is shown in the appendices at the end of the report.

/ Fluid milk items include plain and flavored whole milk products; plain, fortified, and flavored skim and lowfat milk products; and miscellaneous whole, lowfat and skim milk products.

2/ This breakdown was not available prior to 1977. Percentages may not add to total wholesale due to rounding.

if Generally, 11 or more stores (supermarkets, dairy and convenience) nationwide, primarily engaged in food retailing and either under common management, being franchised by a common company, or belonging to a common purchasing association.

4/ Nonchain food stores, nonfood stores (drug stores, gasoline stations, etc.), restaurants, hotels, hospitals, nursing homes, vending machines, and any other type of wholesale outlet.

5/ Does not include data for the New York-New Jersey marketing area for which these data were not available.

1/ Fluid milk items include plain and flavored whole milk products; plain, fortified, and flavored skim and lowfat milk products; and miscellaneous whole, lowfat, and skim milk products.

2/ Percentages may not add to total wholesale due to rounding.

3/ Generally, 11 or more stores (supermarket, dairy and convenience) nationwide, primarily engaged in food retailing and either under common management, being franchised by a common company, or belonging to a common purchasing association.

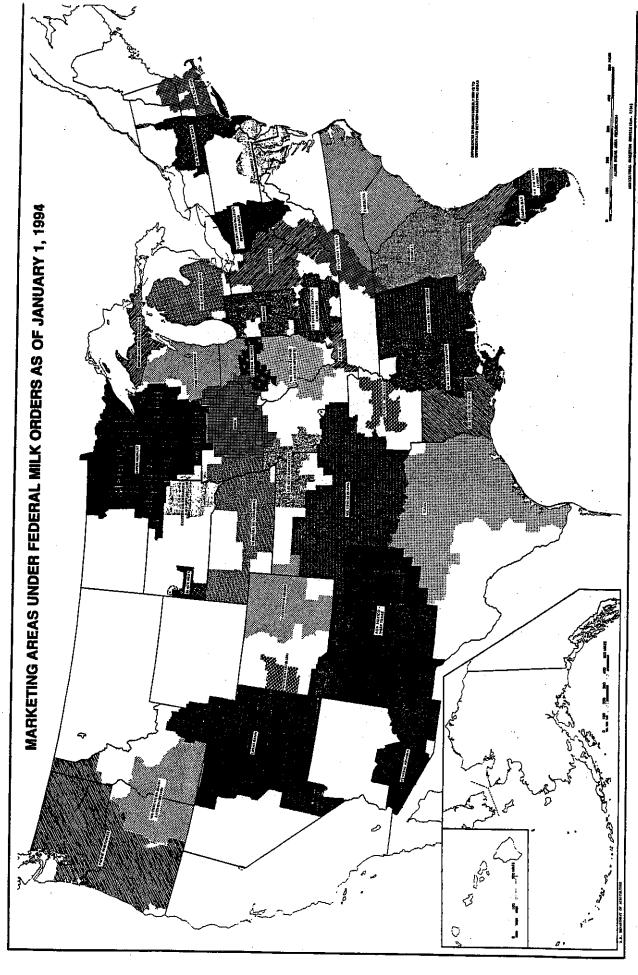

4/ Institutional represents sales made through military installations and public schools, colleges and universities.
5/ All other wholesale represents nonchain food stores, nonfood stores (drug stores, gasoline stations, etc.) restaurants, hotels, hospitals, nursing homes, vending machines, and any other type of wholesale outlet.

Represents data for fewer than three handlers. Data are included in all other wholesale.

Represents data for fewer than three handlers. Data are included in supermarkets.

Kestricted. Represents data for fewer than three handlers. Data are included in all other
 Restricted. Represents data for fewer than three handlers. Data are included in supermar
 Restricted. Represents data for fewer than three handlers. Data are included in military.
 Restricted. Represents data for fewer than three handlers. Data are included in schools.

10/ Includes the Black Hills, Central Illinois, Eastern South Dakota, Greater Kansas City, Paducah, and Western Colorado marketing areas for which all the data were restricted. Each method total includes restricted data which were not shown for individual marketing areas.

### APPENDIX F--ADDITIONAL INFORMATION PUBLISHED IN "FEDERAL MILK ORDER MARKET STATISTICS"

In the July/August 1994 Summary of "Federal Milk Order Statistics" (FMOS-403), there appeared a special article that highlighted some of the more important findings of the 1993 container survey. This article was titled "Fluid Milk Sales by Size and Type of Container and by Method of Distribution." Following are excerpts from this article, including two tables that otherwise do not appear in this report:

- (1) The proportion of fluid milk products sold in plastic containers increased, continuing the long-term trend in evidence since this survey was first taken in 1963. The 2 percentage point increase pushed the market share of plastic to 74 percent. Sales of fluid milk in paper containers accounted for 25 percent of total sales, while glass containers accounted for less than one-half of one percent of total sales. (See table 1.)
- (2) In all regions of the country, more fluid milk products were sold in plastic containers than in paper and glass combined. Market shares of plastic ranged from 60 percent in the North Atlantic region to over 81 percent in the Southeast region. Glass containers accounted for less than 1 percent of total sales in all regions. (See table 6.)
- (3) Plastic containers accounted for more than 75 percent of the sales of whole milk, 2% and 1% lowfat milk, and skim milk. Conversely, about 80 percent or more of the sales of flavored whole milk, flavored lowfat and skim milk, and buttermilk were sold in paper containers. (See page 41.)
- (4) The market share of fluid milk products

- sold in gallons increased slightly to 64.1 percent. Conversely, the market share of half-gallon containers dropped below 19 percent. About 9.4 percent of total sales were made in half-pint containers—up slightly from the previous survey. Market shares of other container sizes changed marginally from 1991. (See tables 2 and 6.)
- (5) In all regions of the country, more fluid milk products were sold in gallon containers than in all other sizes combined. The market share of gallons ranged from 52.3 percent in the North Atlantic region to 71.2 percent in the East North Central region. The proportion of fluid milk products sold in half-pint containers was significantly larger in the Southwest, Southeast, and West North Central regions. In the North Atlantic region, quarts accounted for more than twice the national average. (See table 6.)
- (6) Gallon containers accounted for much larger proportions of the sales of whole milk, 2% lowfat milk, 1% lowfat milk, and skim milk. On the other hand, almost two-thirds of the sales of flavored whole milk and more than 77 percent of the sales of flavored lowfat and skim milk were made in pint and half-pint containers. These market shares might be expected as the sales of these flavored milk products are made predominantly through schools and other food service outlets. More buttermilk was sold in half-gallon containers than in other sizes. (See page 41.)
- (7) Sales of fluid milk products in gallon sizes were nearly all in plastic containers while sales in quart or smaller sizes were

made predominantly in paper containers. This leads to the conclusion that the importance of a particular size of container in any particular region, or for any particular product, determines the importance of a container type. (See page 42.)

For example, in the North Atlantic region, the proportion of fluid milk products sold in paper containers was significantly higher--39.4 percent compared to the national average of 25.3 percent. (See table C.) This occurred because the proportion of fluid milk products sold in this region in half-gallon and quart containers--sizes for which paper is the dominant type--was significantly higher. Similarly, both flavored whole milk and flavored lowfat and skim milk had more than 84 percent of their sales in paper containers because over 81 percent of these products were sold in container sizes for which paper is dominant--quart and smaller sizes. (See page 41.)

- (8) The container size with the largest change in container type is the half-gallon. While paper is still dominant, the market share of plastic half-gallons increased by 8.8 percentage points to 43.6. This drop in the sales of paper half-gallons is most responsible for the overall drop in the market share of paper. (See page 42.)
- (9) The proportion of fluid milk products sold through wholesale outlets remained unchanged. The market share of wholesale in all markets in 1993 was 99.0 percent of total sales; the remaining 1.0 percent was home-delivered. (See table 7.) Although the long-term trend has been an increasing proportion of sales through wholesale outlets, it now appears that the rate of decline in home-delivery may have ended.

In fact, the home-delivery market share has not changed since 1989.

(10) The most important wholesale outlet continues to be food chain stores, which accounted for more than two-thirds of total fluid milk sales. Regionally, the North Atlantic and Mountain regions showed significant increases in the importance of the food chain store category. However, the Pacific region recorded a notable decrease in the market share of this type of outlet. Food chain stores accounted for larger proportions of sales in the Southeast and West North Central regions, and a smaller proportion in the Pacific region.

The market share of supermarket chains-57.3 percent--and the market share of dairy/convenience stores--10.7 percent-increased from 1991. There was significant regional variation in the importance of both supermarket and dairy/convenience chains. (See table 8.)

- (11) The market share of vertically integrated food chain stores totaled 19.4 percent, up slightly from the 19.2 percent registered in 1991. Sales by vertically integrated supermarket chains accounted for 16.7 percent of total sales, dairy/convenience store chains 2.7 percent. (See table 9.)
- (12) Vertical integration of food chains showed significant regional variation. In the South Atlantic region, more than 36 percent of total fluid milk sales were made by vertically integrated food chains. The comparable proportion in the West North Central region was less than 1 percent. Vertically integrated supermarket chains accounted for 34.3 percent of total sales in the Southeast region, more than 4 times the

market share of these firms in the East North Central region. The market share of vertically integrated dairy/convenience chains in the North Atlantic region was 6.3 percent, well above the national average of 2.7 percent. (See table 9.)

(13) Fluid milk sales through institutional outlets (military and schools) totaled 7.6 percent of total sales, down slightly from 1991. Sales through all other wholesale outlets (nonchain food stores, nonfood stores, restaurants, hospitals, vending machines, etc., combined) accounted for 23.4 percent of total sales, down from 1991. (See table 7.)
